

Jenvey TDS Heritage DCOE Twin body (Single)

Brand: Jenvey
Product Code: TDS
Availability: In Stock
Weight: 0.50kg
Dimensions: 12.00cm x 10.00cm x 6.00cm

Price: \$1,950.00

Short Description

Jenvey Dynamics, the world's leading developer and manufacturer of fuel injection throttle body and induction systems, has just announced a brand-new product that promises to revolutionise the aftermarket classic and retro automotive markets.

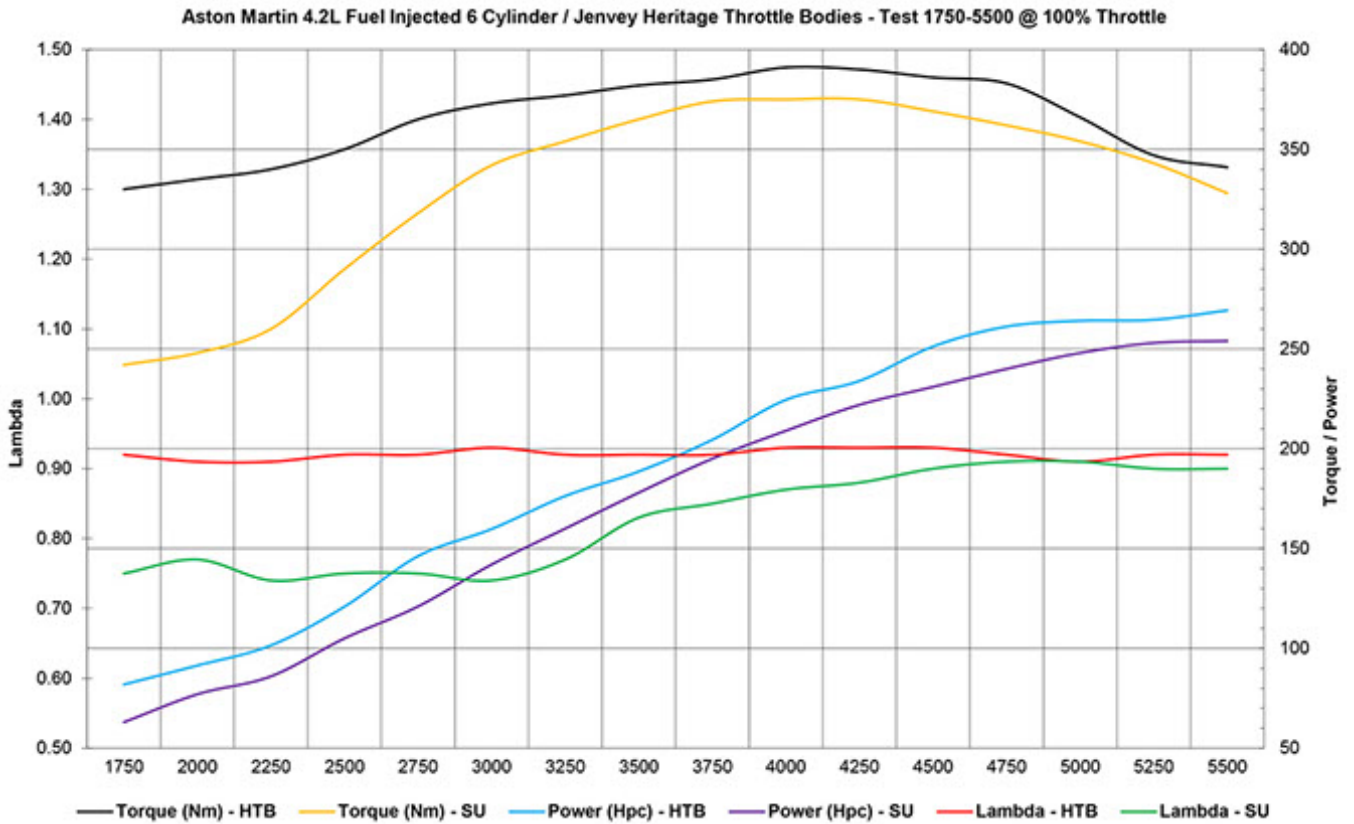

Description

The advantages of modern, electronic fuel injected intake systems are simply too hard (and too numerous) to ignore, with some of the key facets being a reliable, unbroken flow of air, extremely accurate control via advanced standalone ECUs, easy starting in all seasons, and of course, more power and economy. The sole downside on a classic installation, up until now, has always been the aesthetic – something that the Jenvey Heritage Throttle Body solves with its retrospective exterior design and exquisite engineering.

These throttle bodies come with an internal fuel rail built into the float bowl cover and use the Bosch EV14 range of fuel injectors. They also come with an internal contactless throttle position sensor.

Test results

GTC Engineering in UK has already tested these back to back with a traditional triple SU carb setup on an Aston Martin 4.2L straight six. The overall power increase is to be expected but the bottom end gain is startling as is the improvement in driveability.
