Description

Nitron Adjustable Top Plates are a high precision international motorsport quality product. Made from high quality Aluminium with the distinctive Nitron titanium grey anodised finish, adjustment is provided for camber or combined camber and caster depending on the application. The absence of any rubber components and use of positive location and adjustment systems enables motorsport geometry settings to be achieved and to remain constant under arduous track and motorsport conditions.

The design also enables easy, accurate and independent adjustment of camber and castor. On this most applications the standard geometry is obtainable if required.

Supplied as pairs and suitable only for use with smaller diameter motorsport springs.

Please study the drawing of the top plates below to ensure it is suitable for your requirements. If you are any doubt please contact our sales department before ordering. Measurements state amount of adjustment provided. It is not possible to state geometry achievable as it will depend on the ride height setting and other non-standard components used.
