

Jenvey TDT Heritage DCOE Twin body (Triple)

Brand: Jenvey

Product Code: TDT

Availability: 7 Days

Weight: 1.50kg

Dimensions: 30.00cm x 20.00cm x
15.00cm

Price: \$4,690.00

Short Description

A triple side draught kit to suit inline sixes.

Description

The advantages of modern, electronic fuel injected intake systems are simply too hard (and too numerous) to ignore, with some of the key facets being a reliable, unbroken flow of air, extremely accurate control via advanced standalone ECUs, easy starting in all seasons, and of course, more power and economy. The sole downside on a classic installation, up until now, has always been the aesthetic – something that the Jenvey Heritage Throttle Body solves with its retrospective exterior design and exquisite engineering.

These throttle bodies come with an internal fuel rail built into the float bowl cover, an internal throttle position sensor and Bosch EV14 fuel injectors.

Test results

GTC Engineering in UK has already tested these back to back with a traditional triple SU carb setup on an Aston Martin 4.2L straight six. The overall power

increase is to be expected but the bottom end gain is startling as is the improvement in driveability.
